Cabinet Specifications

Woodscapes Interiors manufactures only European frameless style cabinetry. This type of cabinetry is commonly referred to as "full Access" because no front face frame is used to mount doors and hardware. The entire interior of the cabinet is fully visible and accessible without the opening being reduced by a front frame. Door and Drawers stretch to their fullest dimension possible to allow utilization of all interior space. The outward appearance has a sleek, seamless style as doors and drawer fronts function with 1/8" reveal between all parts. Nearly any style, from timeless traditional designs to contemporary trends can be created by careful door style and finish selection.

3/4" material is used for all structural components, with screw and dowel construction, providing superior strength and rigidity.

Picture is representative. Not all parts and fasteners used for all cabinet types.

All interior finishes are matched in color, grain and texture. Plywood cores with prefinished hardwood veneer are used for all wood door cabinets. Laminate doors and colored thermofol door products have white melamine interiors on industrial grade particle board.

Drawers

Standard drawers for our Professional series cabinets are 5/8" solid wood drawer boxes with undermount, 3/4 extension, concealed slides. An upgrade to full extension undermount "soft close" slides is available. Our Custom series features 5/8" wood drawer boxes with full extension undermount "Blum Tandem" slides. Laminate and thermofol products feature the meta-box drawer system.

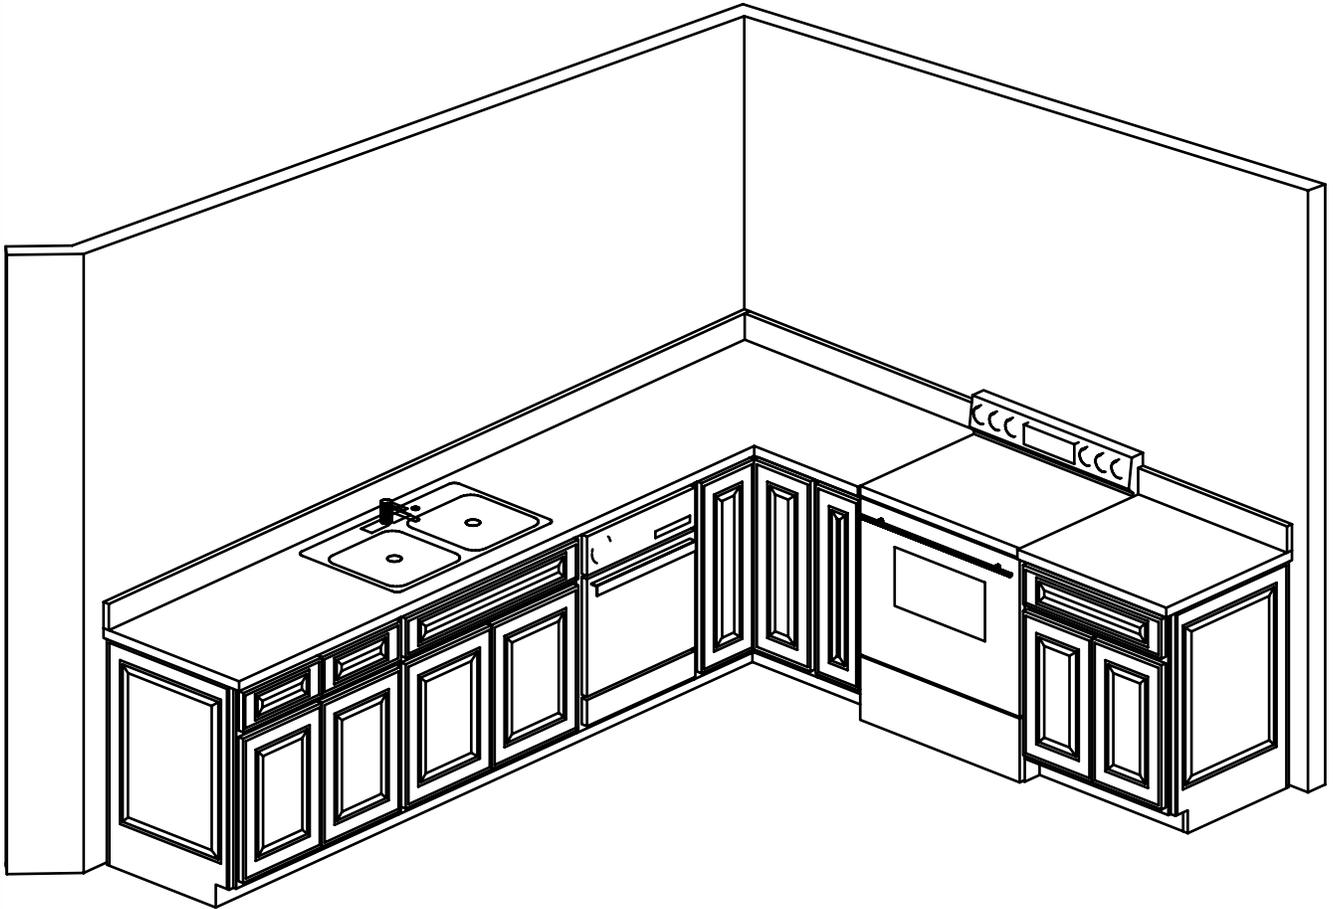

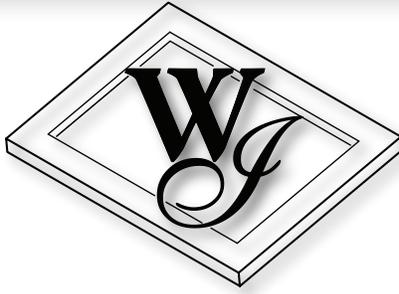

Construction and materials

Having no front frame, European style cabinets require more substantial materials to be used in the cabinet box construction. Our cabinets are constructed using 3/4" material for all structural parts. Cases are assembled using compression dowels and/or blind mortise screws in invisible areas. Cabinet backs are 1/8" hardboard and are mounted into a dado concealing the hanging rails from view behind the back. The design and material of this cabinet box is the same as our commercial grade cabinet, engineered for use in schools, hospitals and other commercial buildings. Woodscapes Interiors uses only the best quality material and hardware available. Each job is manufactured individually utilizing state of the art computerized machinery. Superior fit and finish means quality that lasts for generations.

Mortise & Tenon Doors

Raised Panel #1

Simpler lines for a casual appearance

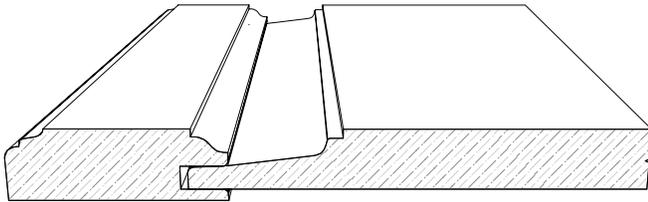

Standard frame dimensions 2 5/16"

Raised Panel #2

More shaping in the edges and a "slant & step" panel provide a bit more interest

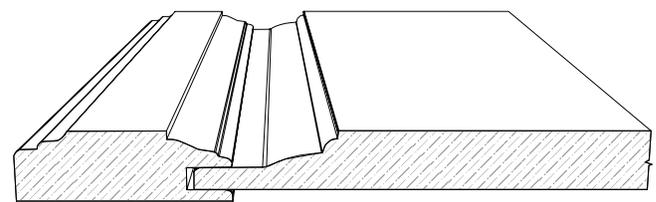

Standard frame dimensions 2 5/16"

Raised Panel #3

Same framing as #2 with a "filet" step in the center panel. Works well with glaze finishes.

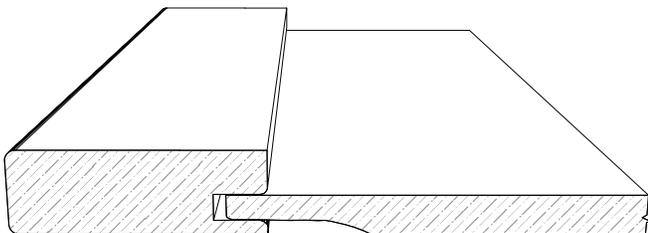

Standard frame dimensions 2 5/16"

Raised Panel #4

Our most embellished, elegant design. Wider edge profiles provide more detail and less flat areas. Custom wider framing (2 3/4") works beautifully in this design.

Standard frame dimensions 2 5/16"

Shaker Reverse Raised Panel

A solid wood center panel in the classic Shaker style provides more weight to the door, for a better feel, and better color/finish depth.

Standard frame dimensions 2 5/16"

All Panel profiles, edges, and framing beads are interchangeable. Make special notes on the order form.

Framing dimensions can be customized for special circumstances or to create a special "look". For example, style #4 looks great with a wider frame profile (2 3/4"-3"). Moderate charges may apply.

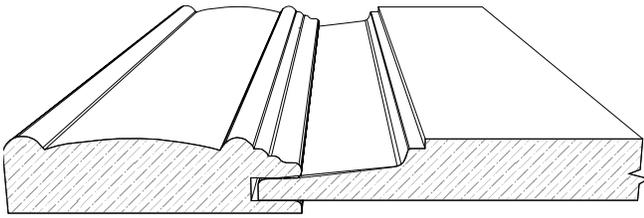

Other special edges and panel profiles are available. Contact us for special applications like this.

The same profiles are available as Recessed Flat Panel designs with 1/4" plywood center panel inserts.
